**Introduction**

**About this UPS**

The American Power Conversion (APC®) Uninterruptible Power Supply (UPS) provides protection for electronic equipment from utility power blackouts, brownouts, sags and surges. The UPS filters small utility line fluctuations and isolates electronic equipment from large disturbances by internally disconnecting from utility line power. The UPS provides continuous power from the internal battery until utility power returns to safe levels or the battery is fully discharged.

**Unpack**

**Read the Safety Guide before installing the UPS.**

Inspect the UPS upon receipt. Notify the carrier and dealer if there is damage.

The packaging is recyclable; save it for reuse or dispose of it properly.

The UPS and the battery modules are heavy. Remove the battery modules to lighten the UPS during installation. Refer to battery removal instructions on the packaging.

Check the package contents:

- UPS
- Front bezel
- Display bezel
- Top covers (2) and one screw (tower configuration)
- EPO connector
- Serial cable
- Eight ornamental screws for securing the unit in the rack
- Four cage nuts
- Two rack-mount brackets (used as stabilizers in tower configuration)
- Eight pan-head locking screws
- Two rail cleats
- Eight pan-head screws
- Literature kit containing:
  - Product documentation
  - Smart-UPS® User Manuals CD
  - PowerChute® Business Edition CD
  - Safety information
  - Warranty information

**Additional contents for 230 V models:**

- IEC power connector
- IEC jumper cables

Rack-mount configuration

This unit is intended for mounting in a four post rack. To order a two post rack-mount kit contact your dealer or refer to the APC Web site, www.apc.com.

The UPS and the battery modules are heavy. Remove the battery modules to lighten the UPS during installation. Refer to the battery removal instructions on the packaging.

Install rack-mount brackets and rail cleats

Four screws must be used to secure each rail bracket and rail cleat to the UPS. One rack-mount bracket and one rail cleat must be secured to the both sides of the UPS.

NOTE: The model and serial numbers are located on a small, rear panel label. For some models, an additional label is located on the chassis under the front bezel.
**Install unit in rack**

Ensure rack stability prior to installing devices in the rack.

The UPS should be installed at or near the bottom of the rack.

When installing rails in the rack, install two cage nuts above each rail, (see diagram).

Secure the UPS in the rack using the four cage nuts and eight ornamental screws included in the package.

---

**Install batteries**

- Connect only the first two batteries in the string of three batteries. Be sure that the battery connectors are fully engages.
- Do not connect the single battery or the last battery installed in the string of three batteries.

---

**Close and secure battery doors**

Foam spacers
Rack-mount to tower conversion procedure

The UPS and the battery modules are heavy. Remove the battery modules to lighten the UPS during installation. Refer to the battery removal instructions on the packaging.

Install stabilizer brackets
Stand the UPS on the side with the embossed marks.
Secure a stabilizer bracket (supplied), to both sides of the UPS.
Secure each bracket with two pan head locking screws (supplied).

Install two top covers
Install the large top cover by placing it in the slots on the UPS and sliding the cover forward.
Install the small top cover by placing it in the slots on the UPS and sliding the cover forward.
Secure the top covers with a #8 black screw (supplied).

Install batteries
Connect only the first two batteries in the string of three batteries. Be sure that the battery connectors are fully engages.
Do not connect the single battery or the last battery installed in the string of three batteries.

Close and secure the battery doors
Input hardwire 230 V models only

Hardwiring must be performed by a qualified electrician. Adhere to all national and local regulations.

1. Use a dedicated branch circuit with a maximum of 32 A of over-current protection, (either a circuit breaker of fuses).
   A lower rated branch may be used depending on the requirements of the UPS load.
   Allow an additional 600 W for the UPS during the battery replacement procedure.
2. Switch the circuit breaker OFF prior to connecting equipment and power to the UPS.
3. Remove the access panels located on the rear panel of the UPS.
4. Remove the knockout from the input access panel.
5. Use # 10 AWG (5 mm²).
   Strip approximately six inches (152.4 mm) of the outer jacket from the input cable exposing the wires.
   Strip .5 inch (12.7 mm) of the individual wire coverings.
6. Route the input cable through the hole in the input access panel. Apply an appropriate strain relief.
7. **Connect the ground wire prior to connecting the line wires.**
8. Replace the access panels and secure each panel with three screws.

Accessories

Install accessories prior to connecting power to the UPS.
Refer to the APC Web site, [www.apc.com](http://www.apc.com) for available accessories.

- Input/output hardwire kit
- Two post rack option
Connect batteries

After all of the batteries have been connected, tuck the battery cables and the battery disconnect cord in the space provided in the battery doors. This will ensure a secure fit of the bezel to the unit.

Configure bezel

Snap the display out of the bezel. Rotate the bezel and reinstall the display for a tower configuration.
Connect display cable and install bezel

Rack-mount configuration

Tower configuration
Start-up

Connect Equipment and Power to the UPS

1. The UPS features a chassis ground connection screw located on the rear panel, for connecting the ground leads on transient voltage devices.

Prior to connecting the grounding wire, ensure that the UPS is NOT connected to utility or battery power.

2. Connect equipment to the UPS.

3. **208 V models:** Plug the UPS into a two-pole, three-wire, grounded receptacle only. Avoid using extension cords.

   **230 V models:** Refer to the Input Hardwire section in this manual.

4. To use the UPS as a master on/off switch be sure all connected equipment is switched on.

Rear Panels

![Rear Panels Diagram](image)

Start the UPS

1. Press the ![](image) button on the front panel to start the UPS.
   
   - The battery charges to 90% capacity during the first four hours of normal operation. *Do not* expect full battery run capability during this initial charge period.
   
   - Refer to the APC Web site, www.apc.com for battery runtimes.

2. For optimal computer system security, install PowerChute Smart-UPS monitoring software.
Communication Ports

**SERIAL PORT**

Use only the supplied cable to connect to the serial port. A standard serial interface cable is incompatible with the UPS.

Emergency Power Off

The emergency power off (EPO) feature is user configurable. EPO provides immediate de-energizing of connected equipment from a remote location, without switching to battery operation.

1. Use the EPO connector supplied with the UPS.
2. Use a normally-open contact to connect the +24 terminal to the IN terminal. External voltage is not required.
3. Wire the four-pin connector to the EPO system.

The EPO interface is a Safety Extra Low Voltage (SELV) circuit. Connect it only to other SELV circuits. The EPO interface monitors circuits that have no determined voltage potential. Such closure circuits may be provided by a switch or relay properly isolated from the utility. To avoid damage to the UPS, do not connect the EPO interface to any circuit other than a closure type circuit.

Use one of the following cable types to connect the UPS to the EPO switch.

- CL2: Class 2 cable for general use.
- CL2P: Plenum cable for use in ducts, plenums, and other spaces used for environmental air.
- CL2R: Riser cable for use in a vertical run in a floor-to-floor shaft.
- CLEX: Limited use cable for use in dwellings and for use in raceways.
- For installation in Canada: Use only CSA certified, type ELC, (extra-low voltage control cable).
- For installation in other countries: Use standard low-voltage cable in accordance with national and local regulations.

The UPS has a diagnostic feature that indicates the utility voltage. The UPS starts a self-test as part of this procedure. The self-test does not affect the voltage display.

Press and hold the button to view the utility voltage bar graph indicator. As soon as the on-line LED starts flashing indicating a self-test is in progress, the five-LED Battery Charge indicator will show the utility input voltage.

Refer to the figure on the left for the voltage reading. Values are not listed on the UPS. The indicator on the UPS shows the voltage is between the displayed value on the list and the next higher value, *(see Troubleshooting)*.

**Maintenance, Transport, and Service**

**Replace battery modules**

This UPS has easy-to-replace, hot-swappable battery modules. Replacement is a safe procedure, isolated from electrical hazards. You may leave the UPS in the rack and connected equipment on during the replacement procedure.

**Once the batteries are disconnected the connected equipment is not protected from power outages.**

Refer to the appropriate replacement battery user manual for battery module installation instructions. See your dealer or contact APC at [www.apc.com](http://www.apc.com) for information on replacement battery modules.

Be sure to deliver the spent battery(s) to a recycling facility or ship it to APC in the replacement battery packing material.

---

**Open battery doors**

![Open battery doors](image1)

**Remove spent batteries from the UPS**

Pull the battery disconnect cords attached to the battery connectors. DO NOT pull the battery cables to disconnect the batteries.

![Remove spent batteries](image2)

**Install new batteries**

![Install new batteries](image3)
Service

If the UPS requires service do not return it to the dealer. Follow these steps:

1. Review the problems discussed in Troubleshooting to eliminate common problems.

   - Note the model number of the UPS, the serial number located on the back of the unit, and the date purchased. If you call APC Customer Support, a technician will ask you to describe the problem and attempt to solve it over the phone. If this is not possible, the technician will issue a Returned Material Authorization Number (RMA#).
   - If the UPS is under warranty, repairs are free.
   - Procedures for servicing or returning products may vary internationally. Refer to the APC Web site for country specific instructions.

3. Pack the UPS in its original packaging. If this is not available:
   - Pack the UPS carefully to avoid damage in transit. Never use Styrofoam beads for packaging.
   - Damage sustained in transit is not covered under warranty.

4. Always DISCONNECT THE UPS BATTERY before shipping in compliance with U.S. Department of Transportation (DOT) and IATA regulations. The battery may remain in the UPS.

5. Mark the RMA# on the outside of the package.

6. Return the UPS by insured, prepaid carrier to the address given to you by Customer Support.
Two-Year Warranty

The limited warranty provided by American Power Conversion (APC®) in this statement of Limited Factory Warranty applies only to products you purchase for your commercial or industrial use in the ordinary course of your business.

Terms of warranty
APC warrants its products to be free from defects in materials and workmanship for a period of two years from the date of purchase. The obligation of APC under this warranty is limited to repairing or replacing, at its sole discretion, any such defective products. This warranty does not apply to equipment that has been damaged by accident, negligence or misapplication or has been altered or modified in any way. Repair or replacement of a defective product or part thereof does not extend the original warranty period. Any parts furnished under this warranty may be new or factory-remanufactured.

Non-transferable warranty
This warranty extends only to the original purchaser who must have properly registered the product. The product may be registered at the APC Web site, www.apc.com.

Exclusions
APC shall not be liable under the warranty if its testing and examination disclose that the alleged defect in the product does not exist or was caused by end user or any third person misuse, negligence, improper installation or testing. Further, APC shall not be liable under the warranty for unauthorized attempts to repair or modify wrong or inadequate electrical voltage or connection, inappropriate on-site operation conditions, corrosive atmosphere, repair, installation, start-up by non-APC designated personnel, a change in location or operating use, exposure to the elements, Acts of God, fire, theft, or installation contrary to APC recommendations or specifications or in any event if the APC serial number has been altered, defaced, or removed, or any other cause beyond the range of the intended use.

THERE ARE NO WARRANTIES, EXPRESS OR IMPLIED, BY OPERATION OF LAW OR OTHERWISE, OF PRODUCTS SOLD, SERVICED OR FURNISHED UNDER THIS AGREEMENT OR IN CONNECTION HEREWITH. APC DISCLAIMS ALL IMPLIED WARRANTIES OF MERCHANTABILITY, SATISFACTION AND FITNESS FOR A PARTICULAR PURPOSE. APC EXPRESS WARRANTIES WILL NOT BE ENLARGED, DIMINISHED, OR AFFECTED BY AND NO OBLIGATION OR LIABILITY WILL ARISE OUT OF, APC RENDERING OF TECHNICAL OR OTHER ADVICE OR SERVICE IN CONNECTION WITH THE PRODUCTS. THE FOREGOING WARRANTIES AND REMEDIES ARE EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES AND REMEDIES. THE WARRANTIES SET FORTH ABOVE CONSTITUTE APC SOLE LIABILITY AND PURCHASER EXCLUSIVE REMEDY FOR ANY BREACH OF SUCH WARRANTIES. APC WARRANTIES EXTEND ONLY TO PURCHASER AND ARE NOT EXTENDED TO ANY THIRD PARTIES.

IN NO EVENT SHALL APC, ITS OFFICERS, DIRECTORS, AFFILIATES OR EMPLOYEES BE LIABLE FOR ANY FORM OF INDIRECT, SPECIAL, CONSEQUENTIAL OR PUNITIVE DAMAGES, ARISING OUT OF THE USE, SERVICE OR INSTALLATION, OF THE PRODUCTS, WHETHER SUCH DAMAGES ARISE IN CONTRACT OR TORT, IRRESPECTIVE OF FAULT, NEGLIGENCE OR STRICT LIABILITY OR WHETHER APC HAS BEEN ADVISED IN ADVANCE OF THE POSSIBILITY OF SUCH DAMAGES. SPECIFICALLY, APC IS NOT LIABLE FOR ANY COSTS, SUCH AS LOST PROFITS OR REVENUE, LOSS OF EQUIPMENT, LOSS OF USE OF EQUIPMENT, LOSS OF SOFTWARE, LOSS OF DATA, COSTS OF SUBSTITUTE, CLAIMS BY THIRD PARTIES, OR OTHERWISE.

NO SALESMAN, EMPLOYEE OR AGENT OF APC IS AUTHORIZED TO ADD TO OR VARY THE TERMS OF THIS WARRANTY. WARRANTY TERMS MAY BE MODIFIED, IF AT ALL, ONLY IN WRITING SIGNED BY AN APC OFFICER AND LEGAL DEPARTMENT.

Warranty claims
Customers with warranty claims issues may access the APC customer support network through the Support page of the APC Web site, www.apc.com/support. Select your country from the country selection pull-down menu. Open the Support tab at the top of the Web page to obtain contact information for customer support in your region.
Regulatory Information

Regulatory Agency Approvals, Radio Frequency Warnings, Declaration of Conformity

FCC Compliance Notice
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy. If it is not installed and used in accordance with the instruction manual, it may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case users will be required to take whatever measures may be necessary to correct the interference at their own expense.
